## MANAGING THE DIGITALLY INTEGRATED POWER PLANT

January 23-24, 2018 | New Orleans, LA

**Managing the Digitally Integrated Power Plant** examines how digital technologies are redefining workflows and business processes by allowing plant and fleet operators to exchange high quality data, information and analytics throughout power generation assets. Enhanced data quality and applied analytics enable more efficient maintenance, while instant communication results in safer and more reliable operations. This evolution is a constant process, requiring a significantly increased collaboration between operational technology, information technology, and analytics.

**Managing the Digitally Integrated Power Plant** will address how plant operators can maximize the efficiency of their plant operations while integrating disparate digital applications that work both with each other and adhere to cyber security standards.

### KEY TAKEAWAYS INCLUDE

- **Sustaining Economic Competitiveness During a Time of Technological Disruption**
- **Efficiency Improvements Due to Digital Upgrades**
- **Handling Obsolescence with Hardware and Software – Maintaining a Reasonable Upgrade Schedule**
- **Digital Protection in Older and Modern Power Plants**
- **Developing a Completely Automated Cycle Isolation Program**
- **Implementing Cyber Security so it Enables Rather than Hinders New Technologies**
