Physical Natural Gas Trading

Presented by Energy Management Institute
September 15-16, 2014 | Thomson Reuters | New York, NY

*Understand the U.S. physical natural gas market
from the perspective of the supplier, buyer and
analyst.*

Course sponsored by

THOMSON REUTERS

Physical Natural Gas Trading

September 15-16, 2014 - Thomson Reuters - New York, NY

Whether you're a trader focused on making money or a buyer whose priority is saving money, this course will give you the information you need to thoroughly understand how natural gas is traded physically.

What You Will Learn

During this course, we'll be covering the biggest topics impacting the physical natural gas market today, including:

- The reversal of pipeline flows due to the shale supply. Several pipelines are in the process of turning their physical flow direction in the opposite direction. Shale production is not only changing the valuation of the commodity but the actual physical dynamics of the infrastructure, skewing the traditional relationship of the supply demand model.
- Shale production and its implications on the underlying value (NYMEX futures), the effect on the basis markets, and the effects on the midstream infrastructure.
- The current development of gas-fired power generation and the displacement of coal.
- The changing supply/demand equation that is currently underway in the gas market, largely due to power generation needs.

EMI's unique program delves into the details of the physical markets, operations and logistics, and distinct difference between physical and financial markets. We'll focus on making money for traders and saving money for buyers. Course attendees will be exposed to arbitrage (spread) trading as well as outright (long/short) trading opportunities. EMI will present approaches that work for physical trading as well as valuing and relating natural gas back to the wellhead.

Finally the program will end with a very exciting, simulated trading exercise, showing the value of the New York Mercantile Exchange as a remarkable and powerful tool to manage and create transactions. You will:

- Learn about supply and demand for natural gas in various geographic areas of the U.S.
- Explore physical gas markets, pricing information, operations, and contracts.
- Gain knowledge about futures, swaps, options, and Over the Counter markets.
- Become familiar with trading techniques, terminology, hedging, and physical trades.
- Develop expertise in management of market exposure and price risk.
- Improve your negotiation skills.

Subjects covered include:

- Natural gas supply and demand.
- Cost of natural gas from the wellhead to the burner tip.
- Discussion of various pricing mechanisms.
- Physical gas markets and pricing.
- Operations and logistics.
- Comparison of physical and financial trading.
- Arbitrage/spread trading.
- Physical outright (long/short) trading.
- Approach to trading physicals.
- Simulated trading session.

Course Times

8:30am - 4pm, September 15
8:30am - 4pm, September 16

Venue Location

Thomson Reuters

195 Broadway
4th Floor, Soft Skills Training Room
New York, NY 10007

Recommended hotels on registration form.

Registration Fees

1st delegate: \$1,995
2nd delegate: \$1,795
3rd delegate: \$1,600

Fee includes full course, expert instruction, course materials, continental breakfast & lunch.

3 Easy Ways to Register

1 Call PMA Conference Management at 201.871.0474 or send email to: register@pmaconference.com.

2 Complete & fax this form to 253.663.7224.

3 Complete & mail the form to: PMA Conference Management, POB 2303, Falls Church, VA 22042.

Physical Natural Gas Trading

September 15-16, 2014 – Thomson Reuters – New York, NY

Course Syllabus DAY ONE: The Primer

Session 1: Overview of the U.S. Physical Natural Gas Market

Let's set the stage by addressing the topic. What is the production and distribution path and how is physical natural gas produced, transported, balanced, sold and purchased? Why trade natural gas and why trade physical natural gas?

We will delve into the trading characteristics of natural gas and structure of physical gas markets in the U.S., with supply by domestic, Canada and Mexico sources and others countries via liquefied natural gas. We will review the basics of natural gas and characteristics of physical gas markets. Let's look at the history of physical gas markets starting with the pre-futures markets and pre-deregulated markets, both the intrastate and interstate gas transactions. We will see significant differences and opportunities in today's physical gas market. Finally we will touch on who the major players are and what their objectives and strategies might be.

Session 2: Overview of Physical Natural Gas Fundamentals

This session will delve into the physical natural gas fundamentals of supply and demand. It will be a no-nonsense "primer" with detailed analysis of the supply, demand and volatility drivers such as weather, storage, economic conditions, manufacturing inventories, alternate fuel, and pipeline capacity.

Session 3: Differences, Pros and Cons of Trading Physicals and Financials

This session will delve into a detailed discussion of the pros and cons of trading physical and financial natural gas. We will look at each attribute and negative, and discuss why each of these is different with an eye toward profitability, liquidity and risk management. This session will also review the main trading procedures employed in both the physical and financial areas.

Session 4: Physical Natural Gas Price Mechanisms

This session will discuss all of the various pricing mechanisms used in both the physical and financial markets. The session will begin with an overview of all of the main, traditional pricing mechanisms in the U.S., Mexico and Canada and then move into commodity-related pricing basis. We will discuss how these mechanisms are applied and when and why to use the various pricing options.

Who Should Attend

This course is specifically designed for people working in: Gas Trading Risk Management, Supply, Transport and Operations, Sales and Marketing, Energy Purchasing, Management and Financial Accounting, Strategic Planning and Economics, and Analysis.

CPE Credits

This course earns 14 CPE credits. EMI awards credit hours towards CPE and Certified Purchasing Manager status (CPM).

September 15-16, 2014 – Thomson Reuters – New York, NY

Course Syllabus

DAY TWO: Let's Focus On The Economics And Making Money

Session 1: Operations and Logistics

This major element of physical trading is the need to move the commodity, including international, interstate and intrastate transportation, balancing, parking and storage. We look at the operations and logistics side of these areas, as well as economics.

Session 2: Natural Gas Arbitrage Trading

Are market fundamentals leading the market or are futures leading the fundamentals? Yes to both. This session will discuss how fundamentals and futures are integrated. Let's look at various futures/physical trades and positions from both a trading and risk management perspective. One of the most common approaches to physical trading natural gas is from an arbitrage (spreads) viewpoint. We will set up a variety of arbitrage relationships and go through the analysis, economics, trade potential and the main market drivers.

Session 3: Physical Natural Gas Arbitrage Trading

We will continue where we left off in the previous session, only this time we will be focusing on the major physical product relationships domestically and internationally. We will set up a variety of arbitrage relationships and go through the analysis, economics, trade potential and the main market drivers.

Session 4: A few Approaches that Work for Physical Natural Gas Trading

This session will continue where the previous session left off and discuss some of the major techniques that work well for the physical gas market. Some trading tools and techniques work better than others for the various markets. The session will discuss some of the major approaches for both outright (long/short) and spread trading. We will take a techno-fundamental approach to the market. The fundamentalists use industry-specific information to determine why markets move while the Technical trader uses price and volume data to determine the direction and timing of the market. Do they contradict each other or can they be used synergistically? This session will use them synergistically in analyzing the main physical markets. Past and current data will be used to demonstrate the approach.

Session 5: Simulated Trading

This exercise will demonstrate the excitement, risk and reward of trading physical natural gas. We will conduct a simulated trading session that will demonstrate many of the principles discussed in the course.

Learn From the Experts that Experts Trust

EMI experts are frequent editorial contributors to petroleum magazines & are trusted by today's leading news sources.

Our experts have been featured in:

Futures Magazine • The Wall Street Journal • USA Today • The New York Times • The Washington Post • Journal of Commerce • CNN • NBC • CBS • ABC • Bloomberg • Reuters

EMI's leading industry experts have an average of over 30 years of knowledge and experience in:

**Energy • Commodity trading • Risk management
• Education • Consulting • Financial services**

Plus many years of managing marketing, international trading, manufacturing, consulting, start-up operations and project finance operations of well-known companies; integrated major oil companies as well as international trading companies.

EMI's industry experts have also provided risk and value management analysis, advice, information, and services to a variety of companies in the electric power industry. Clients have included power marketers, integrated utilities, retail power providers, hedge funds, and power plants.

Highlights of our instructors' experience include: • Developing a suite of models for a variety of power markets that quantify value and risk • Managing spark spread portfolios for hedge funds in the power markets • Operating in futures trading pits as a market observer in the power markets • Developing working papers for investigations and performing compliance audits in the power industry • Helping Texaco initiate its first use of futures exchanges as an integral part of hedging/trading strategy • Chief Operating Officer of Triwell Marketing and refining • Director of OPIS, Oil Price Information Service, a management-consulting and educational services group that solely focused on the downstream energy industry • Member of Board of Directors of Longview Refinery • Member of the New York Mercantile Exchange Petroleum Advisory Board • Expert witness for a hearing before the subcommittee on surface transportation for the Commerce, Science, and Transportation Committee of the US Senate • Supplied expert testimony to a US Senate sub-committee hearing on diesel petroleum product pricing • Supplied testimony to the Federal Highway Administration regarding fuel tax evasion • Expert witness in a MTBE litigation against the major oil companies • Publishers of The Daily Hedger, BTU's Daily Gas Wire and BTU's Daily Power Report, which advise thousands of petroleum professionals daily.

Our instructors are frequent expert speakers for numerous petroleum industry events and trade associations including: • DOE DESC World Energy Conference • OPIS Fleet Fueling • NYMEX • Fuel Management University • NATSO • ATA • AAA • Dairy Distribution • eyeforEnergy eCommerce • OPIS Supply Summit • CIOMA • American Society of Mechanical Engineers • American Society of Lubricating Engineers • Ambrust Aviation • NACHA.

Over the years EMI has developed a series of intensive courses covering all aspects of Energy from production all the way to managing the impact price and volatility on the margin of end-users, resellers, traders, marketers, shippers, retailers and refiners. Our instructors have had the privilege to instruct thousands of professionals representing all aspects of the energy industry, including every major oil company (i.e. Exxon Mobil, BP, Shell, Equilon, Motiva) major power utilities (i.e. Sempra, Edison Mission, Berkley, Toronto Hydro, Dominion, Conectiv) small marketers (i.e. Sprague, Getty, Southern Counties, Western Petroleum) trucking fleets from 50 to 10,000 (i.e. UPS, U.S. Postal Service, Yellow, Pepsi, Werner), gasoline-powered fleets hyper-markets (i.e. The Pantry, Wawa, BJs Wholesale) and many fortune 500 energy consumers.
